

ONLINE TRAINING PROGRAM

REVENUE SAP INTERVENTION IN POWER DISTRIBUTION SECTOR

OVERVIEW

In the present regulated customer centric power distribution sector, it is very critical to provide the best possible services as per the customers' requirements, use operational information tailored to their specific requirements, and maximize revenue potential. To achieve this it is essential for power utilities to deploy a comprehensive and effective Enterprise Resource Planning (ERP) System. Tata Power-DDL has since 2005 enjoyed great success using SAP ERP services across all processes to reduce the need for manual intervention and improve business processes.

Apart from SAP IS-U which supports business functions such as meter reading, meter data management, scheduling, billing, invoicing, accounting, customer service, and integration to customer relations management, Tata Power-DDL has very successfully implemented the other functional modules also like FICO, SD, MM, PP, and PM and technical modules like ABAP, BASIS, BI, HANA etc.

OBJECTIVE

This Course will give an understanding on how SAP can help you to keep your business processes streamlined and as efficient as possible. As a single software solution, SAP eliminates incompatible and isolated information in the back office. One can learn how to use SAP to access data at any time from diverse business areas, providing you with the information you need to make the right decisions.

SESSION PLAN

Overview of SAP-ISU
