

## ONLINE TRAINING PROGRAM

# SAFETY TRAINING PROGRAM FOR POWER UTILITIES

### OVERVIEW

Every business is responsible for safeguarding the health and safety of anyone affected by its activities, such as its employees, customers or visitors to their premises.

The risks to health and safety can differ widely between sectors and individual businesses, of course. In many cases, compliance involves little more than a systematic approach to ensuring common sense precautions are taken to prevent accident and injury. However, businesses engaged in high-risk activities need to focus much more of their attention and resources on health and safety concerns.

Whatever the nature of your business, putting procedures in place to avoid health and safety breaches can help reduce the risk of serious accidents and incidences.

### OBJECTIVE

While efficiency and effectiveness in all our processes are of prime importance, safety remains our first priority. At Tata Power-DDL, we strive to deliver reliable power supply and high-end customer services to all of our customers and we always do so with the safety of our employees and customers in mind.
